

O-42 Asset Condition Structure Refurbishment Project

Soil Boring & Vegetation Maintenance Notification

Pepperell and Dunstable, Massachusetts

March 2023

Dear Neighbor,

As one of the regional electricity providers, we regularly update our systems to ensure you receive the best possible service to your homes and businesses every day. This letter is notifying you of upcoming activity in the O-42 transmission line right-of-way on or near your property.

On behalf of National Grid, CDM Smith and its subcontractors will be performing geotechnical subsurface investigations known as soil borings. These investigations help National Grid obtain information necessary to advance the project by determining existing soil conditions along the project route. ***Soil borings are expected to start in April of 2023 and last approximately three months.*** You may see machinery similar to those pictured, within or near the existing structures in the right-of-way.

In addition to the soil boring activity, crews will be mowing brush and trimming trees to access the sampling locations. These vegetation management activities are slated to begin in April. ***All personnel conducting the field investigations will carry proper photo identification and letters of introduction, which will be made available upon request.***

Stay Informed:

National Grid is committed to keeping residents, businesses, local officials, and community groups informed and engaged in the project. Throughout the project, if you have any questions or would like additional information, please reach out to our Stakeholder Relations Specialist, Leah Gymziak.

We value community input and welcome your questions and feedback.
