Lawrence #1 Substation & Distribution Upgrades

Upcoming Activities in Lawrence

Dear Neighbor,

As you may be aware, National Grid is working on improvements to strengthen the electric distribution systems in your area to more reliably serve our customers. The upgrades include rebuilding the existing substation on National Grid property off South Canal Street as well upgrading a network of overhead and underground distribution lines to improve system capacity.

This August, crews will begin working in local streets to excavate and install an underground distribution network tying into new and existing electrical infrastructure in your area. The work will occur in the roadway on South Canal Street, Amesbury Street, Merrimack Street, Market Street, South Union Street, and Canal Street in Lawrence. *See the other side of this page for a map of work locations.*

Work activities include roadway excavation, soil removal, and the installation of new underground manholes and conduit. Steel road plates may be used to secure excavated areas at the end of each workday until the roadways are backfilled and restored. This work is expected to occur through December.

During these activities there will be an increase of vehicles and team members within the area. Our employees, contractors, and consultants are expected to wear their required personal protection equipment (PPE), including hard hats, high visibility vests and photo ID's.

To ensure the safety of crews performing the work, it may be necessary to close the roadway, or portions of the roadway, to through traffic. Residential traffic is permitted, and signs will be placed in work areas to alert motorists. Police details will be near the work sites to direct any traffic.

Work will occur primarily between the hours of 7:00 A.M. to 5:00 P.M. Monday through Friday. In some areas with high traffic, night work has been mandated by the city for safety. Some work may be approved on the weekends. Truck traffic will use caution while on the streets in your area. **There are no scheduled power interruptions as a result of these operations.**

If you have any questions or would like further information on construction activities, please contact the hotline at 781-236-6286.

Sincerely,

Eric Sacchetti, Consultant
