Real-Time Energy Management (RTEM)

Optimize Energy Performance with Real-Time Data

What is the Real-Time Energy Management (RTEM) Program?

National Grid's RTEM program provides incentives to reduce the cost of installing an RTEM system and accelerates your return on investment through payback based on achieved energy reduction.

Our network of Qualified Service Providers (QSP) will conduct a no-cost energy audit, install the RTEM system, and monitor your building's performance to ensure peak system performance and real, long-term energy savings.

What is a Real-Time Energy Management (RTEM) System?

An RTEM system works with your existing building automation system to identify operational improvements that optimize energy performance in commercial or industrial buildings.

Get started today!

1. Choose a Qualified Service Provider

Visit **ngrid.com/rtem** to identify a Qualified Service Provider who will help you determine eligibility and enroll in the program.

2. Install an RTEM System

Your Service Provider performs a no-cost energy audit and installs an RTEM system.

3. Implement Improvements and See Results

Your Service Provider implements improvements and monitors your system to maximize results.
