Requested Priority (emergency/high/low): High	Requested Implementation Date: TBD	Status: Open, pending MAEBT review Revised. Pending implementation.

Brief Explanation (This will be copied into the description in the Change Control Summary Spreadsheet):

This change control requires modification to the 814 Enrollment Response, 814 Change and 867 Historical Usage to inform the Suppliers a net meter is present, added or removed from an LDC account

Detail Explanation (Exactly what change is required? To which MAEBT Standards? Why?):

814 Enrollment -Revise to add a new value of "X" to the existing REF*PRT segment in the NM1 Loop to inform the Supplier that a net meter is present, added or removed from an LDC account. When the enrollment response is returned by the LDC the 814 would be issued as REF*PRT*T*X. "X" would be the new value for a net metered account.

814 Change – The REF03 of the REF*PRT (where REF02 = T) is used to indicate the presence or lack of a Net Meter with the value X.

When a Net Meter is added to an account, the REF*PRT segment will be sent as REF*PRT*T*X, When a Net Meter is removed, the REF*PRT segment will be sent as REF*PRT*T

This segment will be sent within the NM1 loop with REF*TD*REFPRT. New REF03 field added to REF*TD segment to allow for description of change: Net Meter Add, Net Meter Remove

This may be in conjunction or instead of the REF*MG segment.

867 Historical Usage – Add new value of "X" to REF*03 Reference Identification in the existing REF*PRT segment in the PTD Loop to indicate a net meter exists on the account. (REF*PRT*T*X).

814- Enrollment Response – successful
814 – Change Distribution Company Data
867 – Historical Usage
